Wilson - Seal-Kraft - An Interesting Story

CARROLL W. WILSON
President
—
Sales & Administration

HEWITT E. WILSON
Secretary
—
Production

GEORGE S. WILSON
Eastern Sales
Box 297 Sta. A
Manchester, Conn.
Phone Mitchell 3-7274

In 1914 Mr. Clarence E. Wilson, (having worked in other nurseries since childhood days), started the nursery business which now bears his name in Manchester, Connecticut. His first endeavor in the nursery business was primarily in the production of small seedlings and plants, such as fruit tree seedlings, barberry hedge plant seedlings and rose bush seedlings. These small plants were sold to other large wholesale nurseries for further development into finished salable size plants. As time went by, he also started the production of the finished plants, which in some cases required 5, 6 and even 10 years. By 1925 his nursery was a reasonably complete one, handling many kinds of finished plants as well as small ones.

At about that same time, sale of nursery stock, especially rose bushes, was started through retail store outlets, such as department stores, chain stores and seed stores. Plants packaged for early sale were very crudely packaged and did not remain in good condition very long in the hot and dry store atmosphere. Realizing this, he spent considerable time developing ways to improve the packaging of plants. One of his first steps was the use of heavy duplex Krinkle-Kraft paper, in order to retain as much moisture as possible around the roots of the plant. This type paper is still used today, although it is now being superseded gradually by improved packaging materials. Holding the moisture around the roots of the plants was only half the story, since the tops, or the canes, were not protected. As soon as plants were placed in the hot and dry atmosphere of a store, evaporation of moisture from the plants started and within just a few days, or even a matter of hours, the plants became dry and, consequently, dead. At this point Mr. C. E. Wilson started working on a wax coating which might serve the purpose of holding within the plant the moisture so necessary to its existence. After much hard work and thousands of experiments, a suitable wax formula was found, and in 1931 United States Letters Patent was granted to Mr. C. E. Wilson, covering his wax coating process. This patented wax coating process was trade-marked "Seal-Kraft". This was the first successful wax coating in the entire industry and has proved to be the most important contribution to the successful merchandising of rose bushes and other plants through retail store outlets.

With the advent of volume sales made possible by the Seal-Kraft wax coating process the sale of rose bushes became an increasingly important part of the Wilson Nursery business.

The production of rose bushes in Connecticut was not as economical, nor as practical, as in other parts of the country, and the natural result was to obtain rose bushes from the East Texas area; then and now, the largest rose bush producing area in the United States. Rose bushes were purchased in carload quantities in Texas and shipped to Manchester, Conn., for packaging and processing. It was not long before the extensive distribution created by the immediate acceptance of Seal-Kraft roses dictated the establishment of packing operations in Texas at the source of the rose bushes.

In 1936 a branch packing plant was established in Jacksonville, Texas, under the direct supervision of Carroll W. Wilson, oldest of three sons of Mr. C. E. Wilson. From 1936 through 1939 operations at Jacksonville consisted only of packaging of plants grown by our contract grower. In 1939 growing operations were established in Texas, and C. E. Wilson Nurseries (a Texas Corp.) was established at that time. From this time on operations at Manchester, Conn., were gradually transferred to Jacksonville, Texas, which are now headquarters of the Wilson organization.

In 1945 Hewitt E. Wilson moved to Jacksonville, Texas to assist in the production and processing phase of the business. At the death of Mr. C. E. Wilson in 1948, Carroll W. Wilson assumed the presidency of the firm and Hewitt E. Wilson became secretary.

Operations at Manchester, Conn., now are confined solely to sales and distribution of our Seal Kraft products produced and processed at Jacksonville, Texas. Mr. George S. Wilson, third son of Mr. C. E. Wilson, now devotes his entire time to our sales in the North and East. Feel free to contact him direct at any time. See address and phone number under his picture.

Because of the production of rose bushes in Texas, a most integrated operation can be maintained to the direct benefit of our customers. Our present facilities, in addition to our extensive growing operations, include the first cold storage warehouse built in Texas for the sole purpose of the storage and handling of rose bushes. Our operations, for the most part, are confined to rose bushes, since they represent the major portion of store sales. Our business is devoted entirely to the packaging of plants for sale over the retail store counter, and is our only business; as a result, we are able to give close attention and personalized service to every aspect and detail in connection therewith.

Constant improvement of our packages is being made as new packaging materials develop, and improved facilities established as fast as possible. Increasing sales volume every year is sufficient indication of the progressive nature of our business.

THE BEST IN PACKAGED NURSERY STOCK

Fall 1955 — Spring 1956

ROSE BUSHES SALES ARE GOING TO BE GOOD! - HERE'S WHY.

1. Reduced Supply. In late March this spring an unusually late freeze killed many rose bushes in nursery fields because of the critically tender new growth just starting on these plants at the time. This has resulted in a much smaller crop in the whole East Texas area—the largest rose producing area in the country. Cheap, cut-price competition should be at a minimum this year.
2. Good Demand. The same freeze that killed bushes in the field also killed many bushes in home gardens in the entire South and Southwest. There will be a good demand for replacements. Home building continues at a very high pace creating demand for new plantings. Extensive garden news and publicity in magazines, newspapers, radio and TV will maintain this good demand.
3. New All America Rose Selection "Circus", a beautiful multicolor florabunda will be available. The tremendous advertising and publicity program behind this new introduction, will create sales not only for this variety but for all types of roses everywhere.

"Seal-Kraft" with 41 Years Experience Will Provide You With the Best.

QUALITY—Consistent high quality year in and year out has made Seal-Kraft the leader.

PLANTS—Only the best of plants first. Then constant, proper and adequate protection from nursery row to consumer's garden means still the best of plants for your customers.

REFRIGERATED STORAGE FOR PRESERVATION OF PLANT VITALITY. A most important and absolutely necessary part of the Seal-Kraft system of protection to insure consistent high quality.

PLANT PACKAGES. Seal-Kraft packages are undisputed leaders because they afford both maximum plant protection and sales appeal.

SERVICE—From Nursery at Jacksonville or distribution point nearest you, you have Seal-Kraft plants when and as you want them.

DEPENDABILITY—Seal-Kraft and Dependability are synonymous. Forty-one years experience of pioneering in the proper growing, handling, storage and packaging is the basis for this statement.

PRICED RIGHT—Not so low that we can't do the job right. Not so high that you can't be competitive or make a profit.

VARIETY LIST — PATENTED ROSES

WHAT ARE PATENTED ROSES! Several years ago a plant patent law was passed to furnish protection to any person or firm developing a new and distinctive plant. Through the protection provided by this law, a few firms have been able to spend considerable money on the hybridizing and breeding of new varieties of roses. These new and improved varieties are so called patented roses. Further, through this same protection, it has been possible to carry out extensive national advertising with the result that a big demand has been created for these new roses. We are licensed to grow and sell the varieties listed below. A minimum retail selling price is established by the patent owners below which they can not be sold; however, they may be sold at any price above minimum. We list below the best and most popular of these varieties.

ALL AMERICA ROSE SELECTIONS:—About 15 years ago an organization known as All America Rose Selections was established for the purpose of selecting the best of the new roses. This is accomplished through the operation of official test gardens throughout the entire country. The All America rose selection winners which we offer are marked with an asterisk as a guide for the best of these new roses.

Variety List and Minimum Retail Prices

GRANDIFLORA ROSES — A DESCRIPTION

"Grandiflora Rose" as a class was introduced last year for the first time. Plants grow relatively tall—are free flowering, often flower in clusters, yet with individual stems long enough for cutting—flower of size, not as large as Hybrid Tea (average bush rose) but larger than floribunda type rose (see below).

FLORIBUNDA ROSES — A DESCRIPTION

Plants grow to moderate height of about 2 feet—profuse flowers borne almost entirely in clusters—flowers individually are not as a rule very large but borne in clusters provide a profusion of color. These plants ideal for mass planting, such as along a driveway, hedge or fence. Most effective in groups of 3 to 5 plants of same variety.

SEE WHAT "Seal-Kraft" MEANS TO YOU

THIS TRADEMARK HAS CUSTOMER CONFIDENCE
BUILDS SALES FOR YOU!

The SEAL-KRAFT trademark used to identify nursery stock packaged by the patented SEAL-KRAFT process since its inception is familiar to millions of satisfied customers who know from experience that SEAL-KRAFT plants live, grow, and bloom.

For you, the dealer, SEAL-KRAFT stands for even more—it means the utmost in care and protection for the life of every trademarked plant from its inception in the nursery until final planting in the consumer's garden. This adds up to sales and profits for you.

"Seal-Kraft" and Progressive Merchandising are Synonymous

Look at these FIRSTS

C. E. Wilson Nurseries in the development of their Seal-Kraft plant merchandise were first firm:

1. To use duplex Krinkle-Kraft paper.
2. To use corrugated paper cartons of small size for easy handling.
3. To wax coat Rose Bushes.
4. To use Polyethylene plastic film in packaging plants.
5. To use four-color illustrations on plant packages.
6. To operate large scale refrigerated storage of bushes for sole protection of rose bushes.
7. To inaugurate and operate comprehensive cold storage distribution.

SALES AND MERCHANDISING AIDS

At the time each shipment is made (or earlier if requested) we send to you a merchandising kit containing:

- * Extra Large 45"x18" Window Streamer.
- * Large 13"x18" four-color display charts, showing most popular varieties of both standard and patented roses. Suitable for window and counter display.
- * Separate counter display cards for individual varieties.
- * Newspaper mats.
- * Planting and cultural instructions.
- * Radio Scripts.
- * Other miscellaneous information.

FAST SHIPPING SERVICE FOR ALL ORDERS

All new or repeat orders are shipped within 48 hours of receipt of order; often the same day order is received. Because of the perishable nature of our product, all our operations have been designed to insure prompt shipment at all times.

IMPORTANT NOTICE ON IMITATIONS

"Seal-Kraft" processed plants are processed and distributed only by C. E. Wilson Nurseries of Jacksonville, Texas. We have absolutely no connection with any other nursery bearing the Wilson name or any other name. Beware of imitations or misrepresentations.

SAVE ON TRANSPORTATION COSTS THROUGH OUR COLD STORAGE DISTRIBUTION PLAN.

If you are located east of the Mississippi River or more than 500 miles from Jacksonville, Texas.

Here's what we will do.

1. Whenever firm orders for any distribution point area total a minimum carload (10,000 units) we will make a pool car shipment to a cold storage warehouse in advance of earliest shipping date.
2. We will pay the freight and cold storage charges.
3. We will bill you at distribution point prices as given in price schedule.

Here's what you do.

1. At the earliest possible date send us your firm order for your entire season's requirements. This order may be broken down into several orders or lots of a size to accommodate your sales for 10 days or 2 weeks.
2. You may withdraw your stock from storage in lots whenever and as you need it by merely notifying the cold storage company.
3. You pay transportation charges from the cold storage warehouse to your store.
4. You pay us net 30 days for each lot from date the lot is withdrawn from storage.

YOU benefit under this plan by:

1. Lower delivered cost. Even at higher distribution point prices your delivered cost will be less because of the high express rates that apply when stock is shipped direct from nursery.
2. Being able to exploit favorable weather conditions to the fullest by withdrawing stock on short notice. Conversely if weather conditions are bad you may delay withdrawal.
3. Maximum reduction in shrinkage. Since you may withdraw stock only as needed, spoilage should be practically eliminated.
4. Customer satisfaction and good will. Since you will be always selling nursery fresh stock from storage, customer complaints should be negligible.

What we cannot do:

1. Place unordered stock in storage. Still high packaging and transportation charges make the risk too great. Special orders to fill out fast moving varieties and to supplement original orders will be shipped promptly from our nursery cold storage at Jacksonville, Texas, and will be billed for at the F. O. B. Jacksonville price, with customer paying the transportation charges from Jacksonville.
2. Except in a few instances where trucks can be used, we cannot ship to cold storage for later distribution in less than carload lots. Such lots would have to be shipped by express at rates 3 to 4 times the carload freight rates.

This Plan Works—A proven success.

This plan has been operated successfully at the following points:

Atlanta, Georgia
Orlando, Florida
Winston-Salem, N. C.
Richmond, Virginia
Kansas City, Kansas
Wichita, Kansas
St. Louis, Missouri

Chicago, Illinois
Manchester, Connecticut
Denver, Colorado
Colorado Springs, Colorado
Pueblo, Colorado
El Paso, Texas
Albuquerque, New Mexico

It can and will be worked in any of the above points whenever sufficient orders in that general area total approximately 10,000 units.

PLACE YOUR ORDER AT ONCE AND BE SURE TO GET IN ON THE BENEFITS OF THIS PLAN.

SHIPPING SEASON

OCTOBER THROUGH APRIL

Fall planting normally can be accomplished any time after October 1st and since fall is the best time of year for planting in the South, more and more customers are purchasing their plants at that time. Stores are advised to take advantage of this trend and increase their plant sales by ordering shipments for October and November. Weather conditions permitting, our shipping season starts October 1st and shipments can be made anytime thereafter. Also, because of our cold storage facilities, shipments can be extended through April thus increasing the length of the selling season.

TERMS:—All prices quoted are wholesale prices, net 30 days from date of invoice. Credit gladly extended to firms of known responsibility. Satisfactory references required from others. C. O. D. orders must be accompanied by 25% cash. Because of present unsettled conditions prices are for immediate acceptance only and subject to change without notice. All stock is offered subject to being unsold on receipt of order and without liability to us should the stock be injured by frost, hail, fire or other cause beyond our control.

HANDLING, STORAGE & SHIPPING FACILITIES AT THEIR BEST

. . . A very important reason why SEAL-KRAFT processed plants mean bigger profits for you.

OUR PACKING AND COLD STORAGE WAREHOUSE

Improper handling can kill the best plants in the world in a few minutes. To prevent this we have developed and built special handling equipment for many operations such as planting, cultivating, digging, bundling, transporting, storage and grading. All are important but perhaps the most important is our storage facilities. Above is shown our cold storage plant at Jacksonville, Texas, near our Texas

Nurseries in the largest rose growing section in the country. This plant, designed by us, has storage capacity of over three quarters of a million plants. Modern air conditioning and refrigeration equipment keep both humidity and temperature accurately controlled to the exacting storage conditions required for nursery stock.
